

Activity 2

1. Use dbdiagram.io or draw.io to propose a new structure for the `Sakila` database.
2. Define primary keys and foreign keys for the new database.

- I added **bonus** table with **PK bonus_id**, **class** and **FK customer_id**
- I created enum list with class options **Silver**, **Gold** and **Platin**
- I connected the **FK customer_id** to **customer** table
